

## Loadings

Projecting the feature axes into the principal subspace

imagine a sample which has features

$$[1 \ 0 \ \dots \ 0]$$

columns of  $U$  are  
principal eigenvectors  
 $u_1, u_2, \dots, u_s$

projection of 'fake'  
sample with features  
 $[1 \ \dots \ 0]$

$$= [1 \ \dots \ 0] U$$

$U$   $K \times S$  matrix

rows  
of

$$K \begin{bmatrix} 1 & & & \\ & 1 & & \\ & & \ddots & \\ & & & 1 \end{bmatrix} U$$

are the coordinates on  
PC space of the "fake" samples  
with only feature.
